Press Release

MICROPLEX launches *mid-range*, continuous form, flash fusing, duplex Laser printer.

The SOLID F196 is a twin engine Laser solution, capable of 196 impressions / minute.

Solon, Ohio – March 18, 2004: MICROPLEX proudly announced at CeBit – Hanover, Germany, the launch of their newest offering, a *mid-range*, continuous form, duplex laser printer. “We are happy to add another duplex solution for our targeted markets,” states Andre Fedak, President of MICROPLEX. “The F196 duplex, twin engine Laser, offers all of the versatility of our standard F98 single engine product. This versatility is due to features such as; 17” print width, 600 x 600 dpi resolution, flash fusing for hard to handle forms and an environmentally conscious, OPC drum. There has never been a duplex laser product this versatile in this cost/performance class. We feel strongly this solution will finally allow mid-range markets, the duplex solution they’ve been in search of, for applications that require flash fusing laser products,” continues Mr. Fedak.

MICROPLEX Electronic Printing Systems, Ltd. is a Solon, Ohio based printer manufacturer and is a leader in continuous form laser printers, for mid-range production applications. MICROPLEX’s products are available worldwide through their very experienced Channel Partners and MICROPLEX has offices in the USA, Germany, and France.
